4. (currently amended): A method of dynamically representing a multimedia document in a data-processing system via a software module, said multimedia document being made up of a hierarchically-organized set of elements, themselves having attributes, at least one of said attributes being associated with an event-condition-action (ECA) type formalism, said method comprising the following ordered steps:

describing said multimedia document in a description language; and  
having said multimedia document interpreted by said software module, said ECA  
formalisms being interpreted dynamically so as to enable the representation of said multimedia  
document to be varied by means of actions being performed as a function of events and of  
conditionsA method according to claim 1,

in which the hierarchically-organized set is made up of composite elements, each of which is made up of contained elements, the attributes of the various elements being statuses which describe the states of the various portions of the document, and in which an event is

8. (currently amended): A multimedia document made up of a hierarchically-organized set of elements themselves having attributes, at least one of said attributes being associated with an event-condition-action or "ECA" type formalism, said multimedia document being characterized in that it is described in a description language, and in that said ECA formalisms are described in a manner such as to enable them to be interpreted by a software module so as to enable the representation of said multimedia document to be varied by means of actions being performed as a function of events and of conditions~~A multimedia document according to claim 5,~~

in which document the hierarchically-organized set is made up of composite elements, each of which is made of contained elements, the attributes of the various elements being statuses which describe the states of the various portions of the document, and in which document an event is constituted by a change in the value of a status of an element being detected by said element and resulting in an action being performed to change the appearance or

the behavior of the document, when a condition constituted by a logic expression associating status values relating to various elements is satisfied.

9. (canceled).

10. (canceled).

11. (currently amended): A method according to claim 4, wherein said composite elements comprise a plurality of attributes.

12. (currently amended): A method according to claim 11, wherein said composite elements comprise an identification attribute, wherein said identification attribute enables an element to be given a name.

13. (canceled).
